“Evaluation of Magist for ENIAC Partnership”

- Is Magist a suitable partner for Eniac?
- Are orders delivered On-Time?

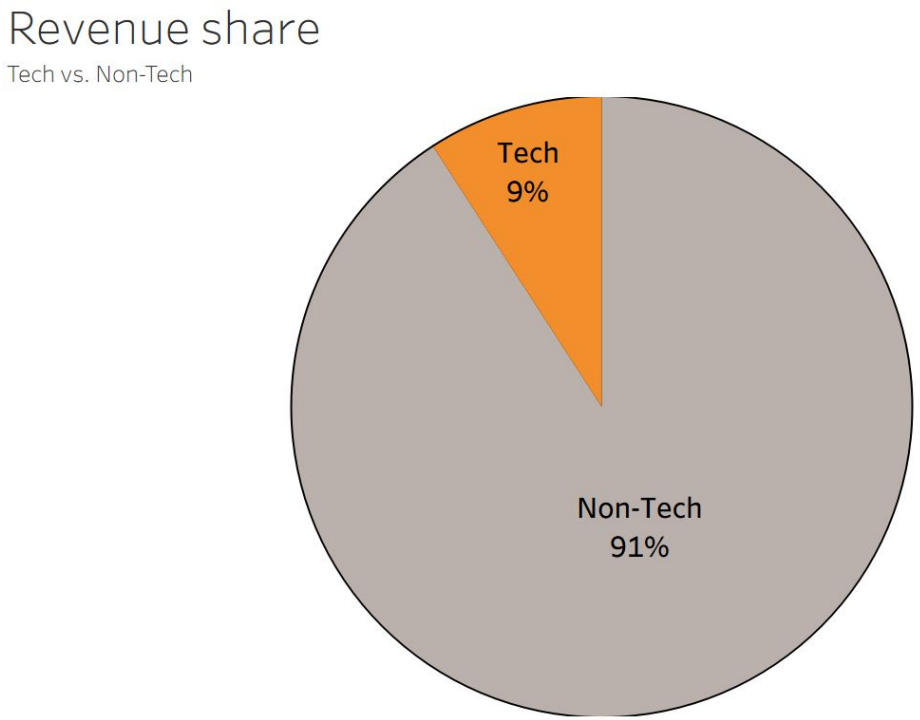
<u>Objectives:</u>

- Product Analysis
- Seller Analysis
- Delivery Status Analysis
- Customer Review Analysis

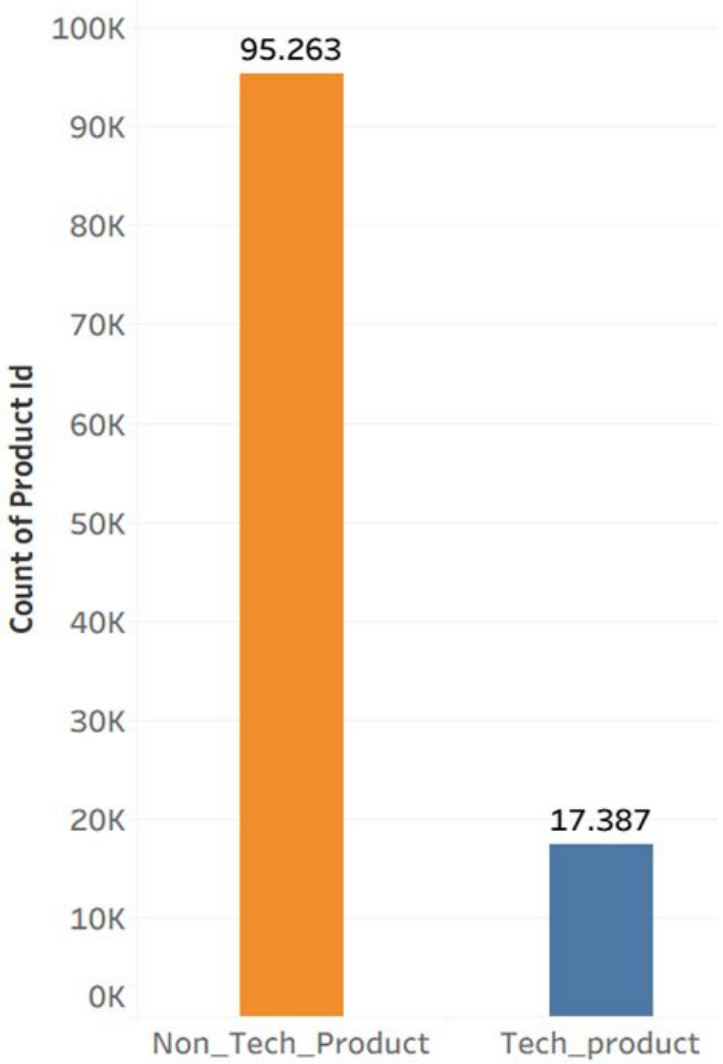
Data Dude&Divas
Date April 13, 2026

Magist is not compatible in the tech industry

Less than 10% of the Magist's product revenue and products number is coming from tech products



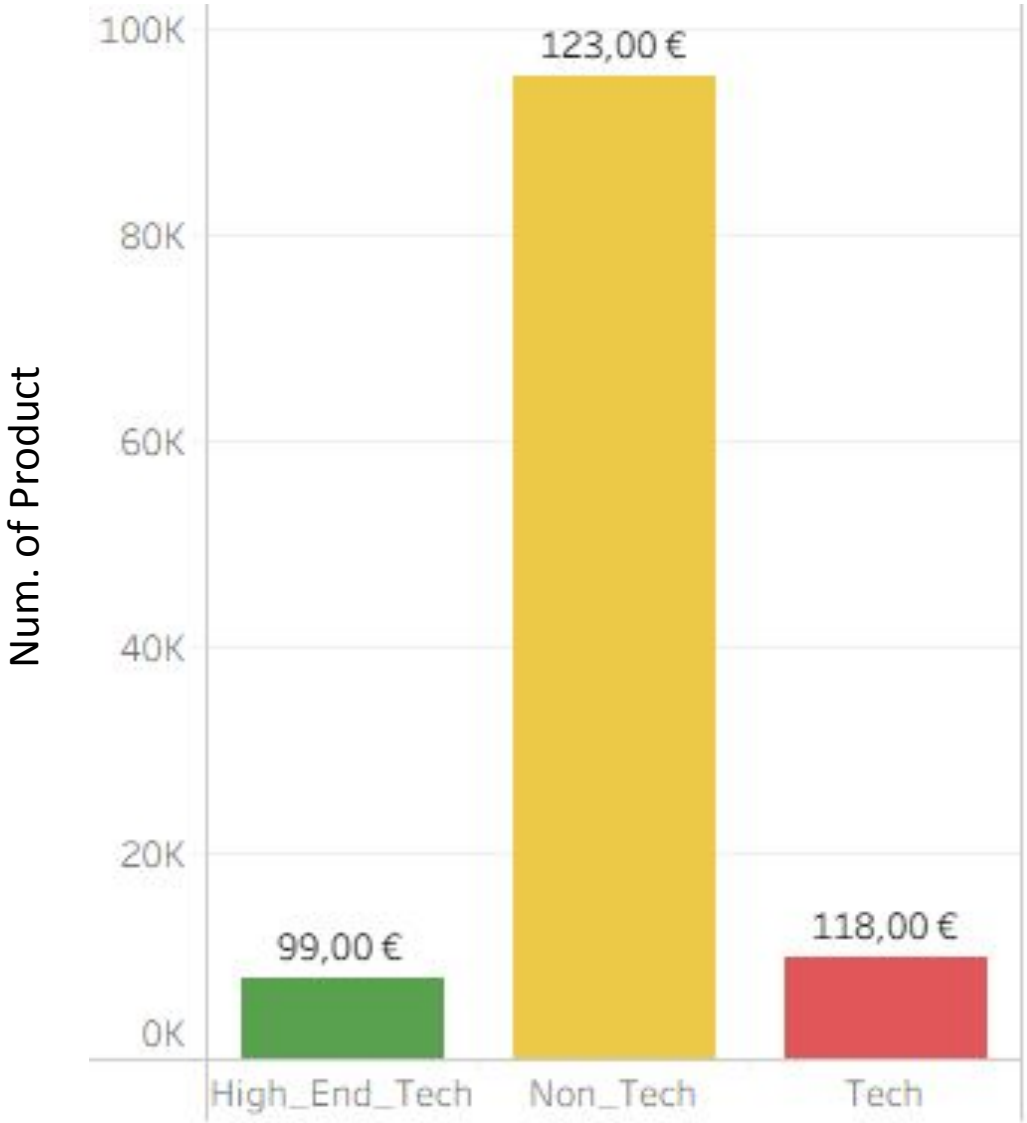
Most of the products on Magist are **non-tech based**



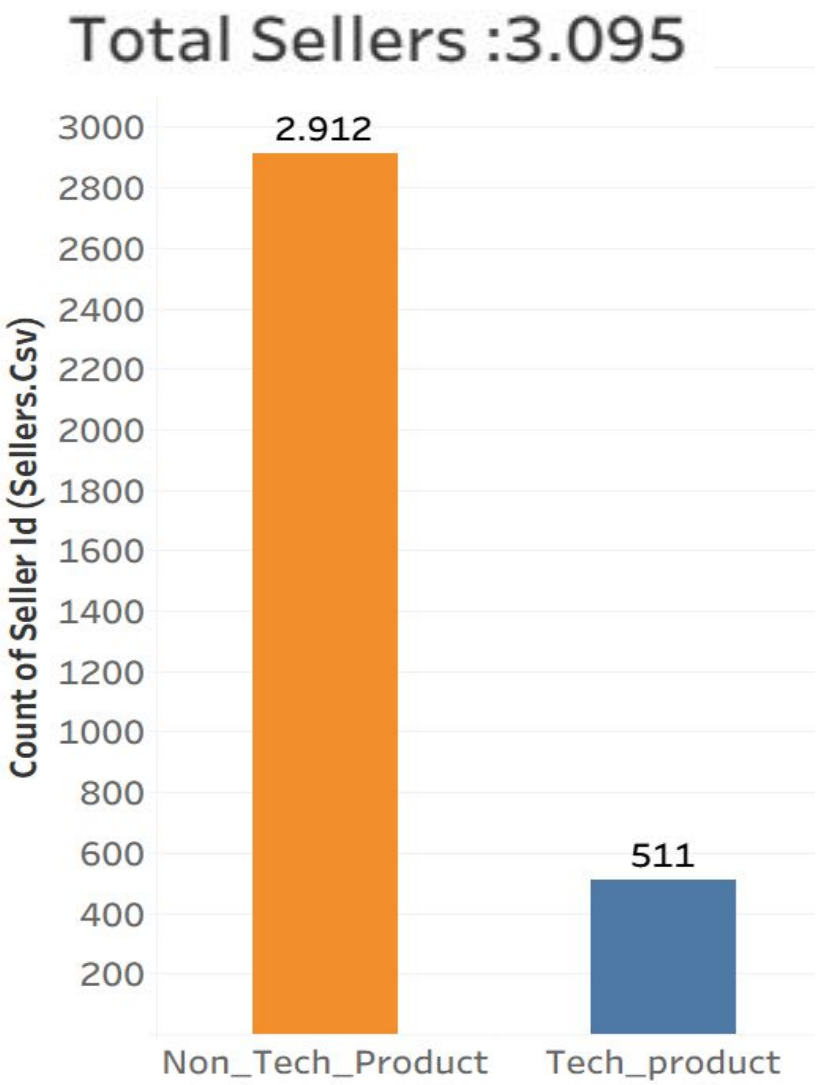
ONLY 10% Tech, AVG PRICE UNDER 120 €.

Average spend on tech is below 120€

However, data is insufficient to determine whether this is due to low willingness to pay or limited product variety.



Seller Analysis



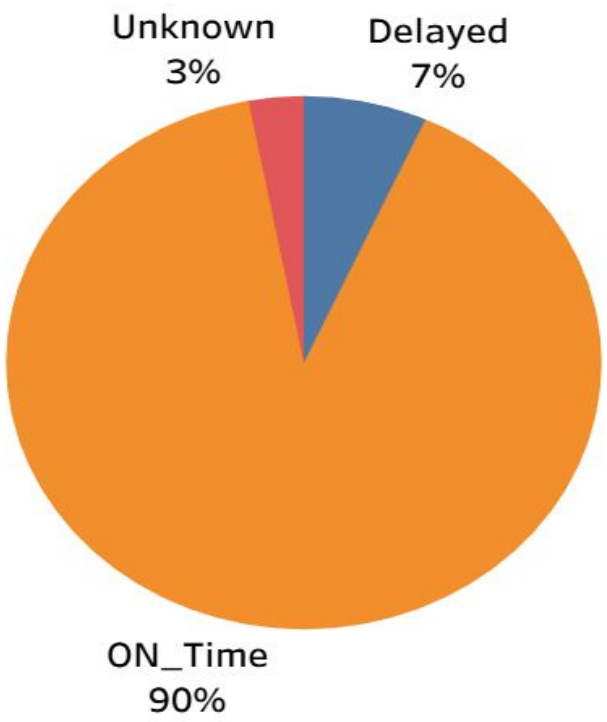
Non_Tech_Product	2.912
Tech_product	511

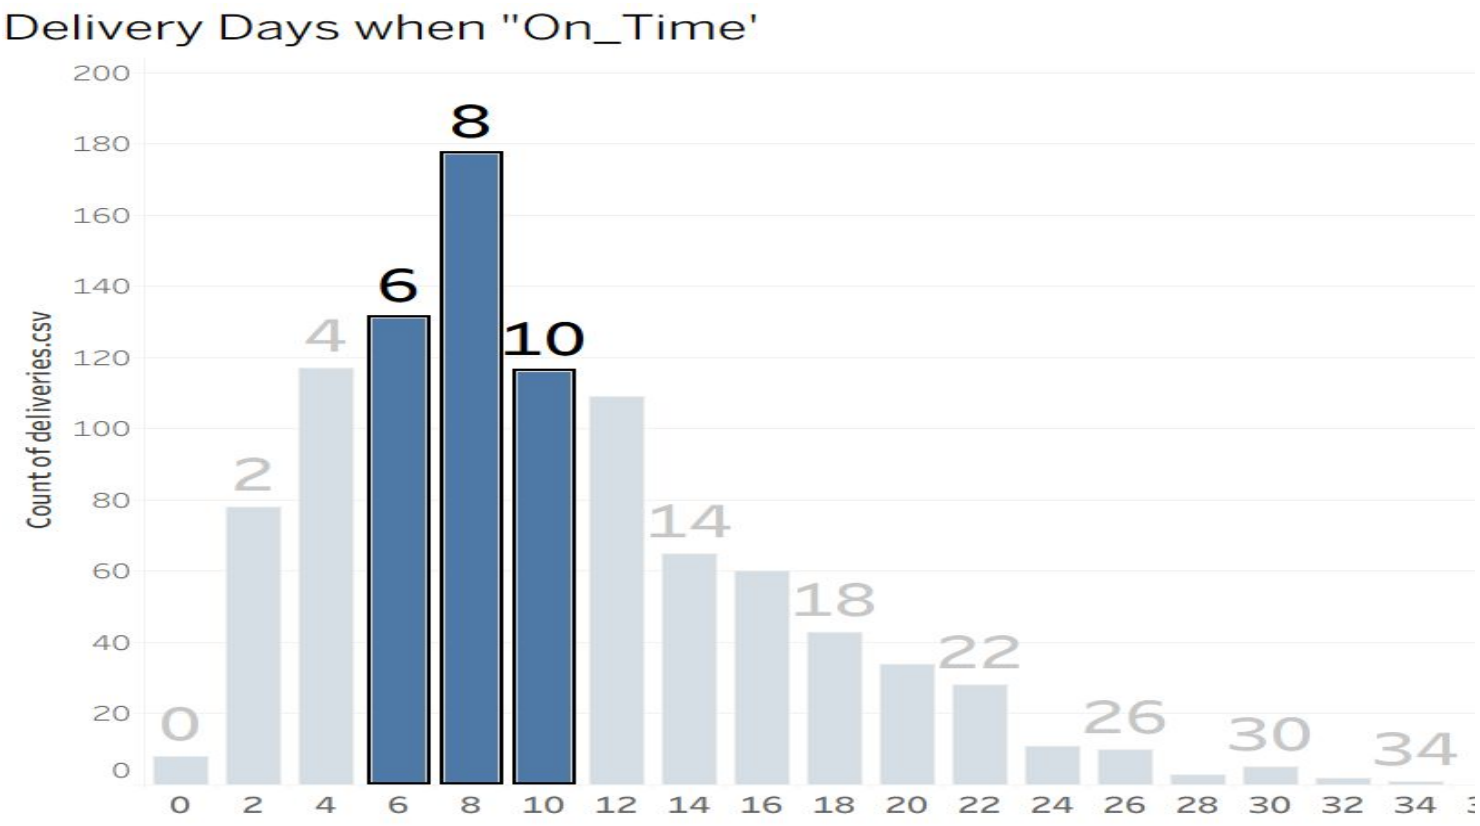
- Limited product variety
- Higher dependency on few sellers – supply risk
- Hard to grow business without strong seller base

Magist deliveries are mostly on-time, but how fast?

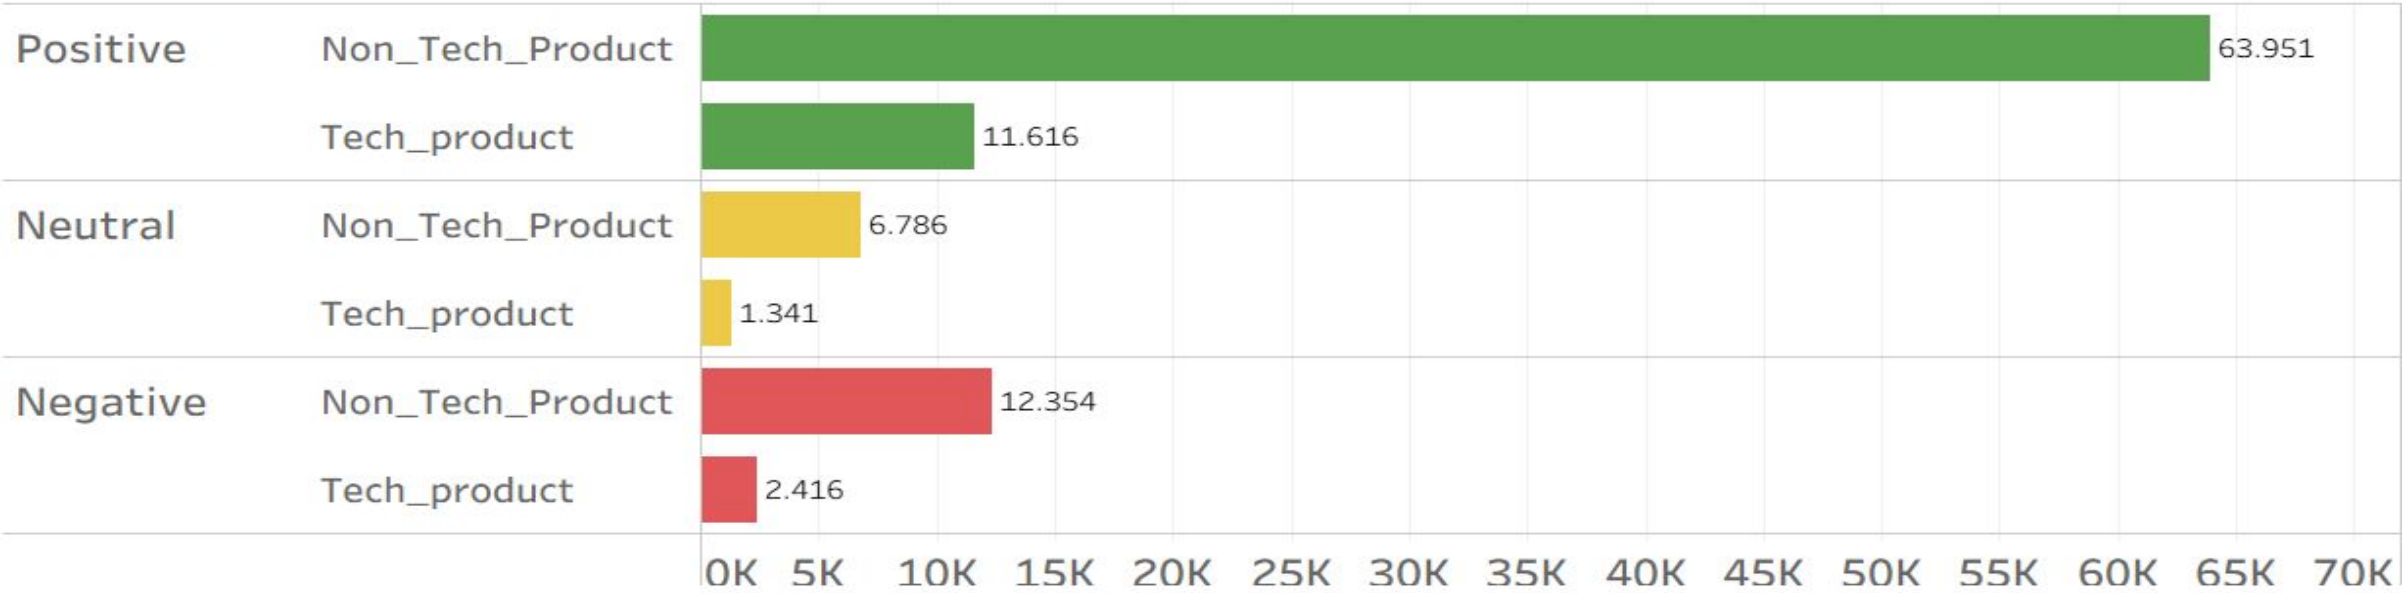
Majority of Tech Product orders are delivered **ON TIME**.

Even when delivered **On-Time** the average delivery time falls around **6-10** days





Customer Review Analysis



- Non-tech products get more reviews compared to tech products.
- Tech products have fewer customer responses or feedback.
- Fewer purchases compared to non-tech products.

Conclusion

- Although delivery performance on Magist is reliable,tech products contribute only a small portion of total revenue.
- This limited market presenceindicates that Magist is not currently an ideal platformfor Eniac’s high-end tech products.
- Therefore, we do not recommend a full-scale partnership.

Thank you
